#### **Special Thanks**

Thank you, Carla Lundeen and the 211 staff for providing data on the calls received in 2022. The addition of this data set adds to the richness of the report.

#### **Additional Support**

Adrianne Olson, Danielle Krozel, Chris Burks, Curt Teff, Domenik Block, Krista Coey Bernau, Joni Olson, Annabelle Sullivan, Sydney Nierman, Abby Wuest, Mackenzie Rose, Anne Paape, Nanishka Ruiz, and local Community Health Workers (CHWs)

#### **Other Thanks**

Thank you to the residents of Buffalo, La Crosse, Monroe, Trempealeau, and Vernon counties in Wisconsin and Houston County in Minnesota for completing the Compass Survey June through August of 2023. Your responses laid the foundation of the assessment.

Additionally, thank you to everyone who attended and gave input at focus group meetings that occurred June 2023 through September 2023. Thank you for lending your thoughts and voices to an otherwise quantitative process.

Finally, thank you to those participating in the Stakeholder meetings in each county. Your assistance in identifying and prioritizing the top needs of the region and counties involved in this process will help drive positive change. A list of organizations involved in the stakeholder meetings is on the next page.

#### List of Organizations that Participated in Community Stakeholder Meetings

Stakeholder Meetings were held in each of the six counties covered by the Compass Now 2024 Report. 177 individuals from 84 different organizations attended. They are listed below:

ABLE, Inc. Allina Health

Arcadia Public Library Ashley Wellness Center Blair-Taylor School District

Boys and Girls Clubs of Greater La Crosse

Buffalo County Buffalo County Board

Buffalo County Emergency Management Buffalo County Health Department Buffalo County Sheriff's Department

Caledonia School District Campbell Family Group Home

CASA for Kids, Inc.

Chileda

City of Caledonia

City of La Crosse – Fire Department

**City of Mondovi** Coulee Recovery Center

Couleecap, Inc.

Family and Children's Center

First National Bank & Trust Company Gale-Ettrick-Trempealeau School District Gateway Area Council, Boy Scouts of America

# Introduction

Compass Now is a joint effort of Great Rivers United Way, area healthcare organizations, and county health departments to improve the quality of life for everyone in the community. This introductory section describes the purpose and additional context for the study. Sections 2-8 present the study results.

# Purpose of the Study

This report is the latest in a series of Compass Now needs assessments and reports published since 1995. In response to these reports, Great Rivers United Way has focused its funding system to more closely reflect identified community needs. In addition, a wide array of community organizations have used report findings to shape their own priorities and support grant requests.

The purpose of this Compass Now 2024 report is to provide an updated assessment of community needs that can be used to inform community action strategies by stakeholders across the region. As illustrated in **Exhibit 1.1**, the Compass Now 2024 study is focused on communities within a six-county region including Buffalo, La Crosse, Monroe, La Crosse, Trempealeau, and Vernon counties in Wisconsin, and Houston County in Minnesota. This report presents the results for the six-county region, with a focus on results for **Buffalo County** in particular.

#### 2023 Population Estimate

| Buffalo     | 13,234  |  |
|-------------|---------|--|
| Houston     | 18,813  |  |
| La Crosse   | 122,678 |  |
| Monroe      | 46,577  |  |
| Trempealeau | 31,170  |  |
| Vernon      | 30,994  |  |
| Region      | 263,466 |  |

Exhibit 1.1 - The Study Region. Source: Community Health Solutions analysis of data from ESRI using ArcGIS Business Software.

# Study Methods and Data Sources

The study was conducted under the direction of Great Rivers United Way, with technical support from a contracted consultant (Community Health Solutions). The study was guided by a Compass Now Steering Committee comprised of stakeholders from public health, health care, and other community sectors. The Steering Committee members provided guidance on the study scope and methods, and also provided liaisons to engage community organizations in promoting participation in the community survey conducted for the study.

The study methods included analysis of community indicators from various sources, plus insights from community members as collected through a community survey and a series of community insight events. The study methods are summarized below, with more details provided in Appendix A.

# **Community Indicators**

#### **Community Demographics**

A community demographic profile can provide insight about the size and distribution of the population in terms of health-sensitive attributes such as age, sex/gender, race, ethnicity, and income. Community demographics were analyzed and mapped using data and software from ESRI, a commercial provider of community data.

#### **County Health Rankings**

The County Health Rankings & Roadmaps (CHR&R) program is a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. The goal of CHR&R is to bring actionable data, evidence, guidance, and stories to diverse leaders and residents so people and communities can be healthier. The University of Wisconsin Population Health Institute created CHR&R for communities across the nation, with funding from the Robert Wood Johnson Foundation.

As illustrated in **Exhibit 1.2**, the County Health Rankings are based on a model of community health that emphasizes the many factors that influence how long and how well we live. The Rankings use more than 30 measures that help communities understand how healthy their residents are today (health outcomes) and what will impact their health in the future (health factors).

#### **Additional Community Indicators**

Indicators from the County Health Rankings are supplemented with additional indicators from sources in the local region. The indicators are provided in several sections of the report, along with notes on specific data sources These supplemental indicators include:

- · Leading causes of death
- Maternal and infant health indicators
- · Youth risk indicators
- Child services cases
- 211 assistance calls
- Asset-Limited, Income-Constrained, Employed (ALICE) households

# **Community Insights**

#### **Community Survey**

A community survey was conducted throughout the region from June to September of 2023. The purpose of the survey was to invite community insights about health needs in the region. The survey was conducted using mixed methods, and respondents could either complete their survey online or submit a paper copy of their survey response. Great Rivers United Way staff and volunteers entered paper survey responses into a Qualtrics survey portal provided by Community Health Solutions.

The survey was conducted in partnership with a wide range of community partners that helped raise awareness and encourage community members to complete the survey. In planning the survey, the project partners began with a common aim to conduct an inclusive survey with insights from a wide array of community members.

It should be noted that the surveys were conducted using convenience sampling. Convenience sampling is a practical approach for obtaining insights from as many people as possible, but without random selection. The results of a convenience sample are instructive for understanding the scope of issues and opportunities in a community; however, results might not be statistically representative of the entire population of a community.

A total of 1,238 individuals submitted a response to the regional survey (although not every respondent completed every item). As shown in **Exhibit 1.3**:

The number of surveys completed by county ranged from 89 in Houston County and Trempealeau County to 536 in La Crosse County. Noting this wide range of responses, it is important to view the survey results at the county level, and recognize that the higher number of responses from La Crosse County and Monroe County have a skewing effect on the regional results.

A total of 92 responses were obtained from **Buffalo County** residents. The **Buffalo County** respondents were predominantly female (77%), as is common in community surveys of this type. Based on self-reports from survey respondents, the **Buffalo county** survey respondents included 7% other than White race alone; 2% Hispanic; and 15% with household income below \$35,000. By comparison, the rates for the overall population are 5% other than White alone; 3% Hispanic, and 24% with household income below \$35,000 (see Exhibit 2.1 for details).

# **Community Insight Events**

In addition to the community survey, the project partners conducted a series of 'community insight events' where community members were invited to share their insights about community needs in a group setting. A total of 20 community insight events were conducted in the August-October time frame (see **Exhibit 8.2** for details). Within each event the participants were invited to share their insights in response to these questions:

- 1. What do you see as the most important health issues or concerns facing your community?
- 2. Are you aware of any new or emerging health issues or concerns that people should know about?
- 3. Are there any particular population groups who may be especially vulnerable for problems with their health or health care?
- 4. What do you see as the most important health resources available to support people in your community?
- 5. Do you have any ideas about how people or organizations could work together to promote better health or health care for the community?

# Limitations of this Report

This Compass Now 2024 report is intended to inform community action strategies by stakeholders across the region. The data presented within the report comes from multiple sources, each with its own set of limitations that should be considered when interpreting the results.

#### **Community Indicators**

Each section of the report includes a series of exhibits showing various community indicators based on various existing data sources. This array of community indicators can be helpful for planning community improvement strategies, but it does not include every possible indicator of community health and wellbeing. We encourage readers to use this report as a starting point, and go beyond the report to seek additional data and information that can help you plan and implement effective strategies for community improvement.

#### **County Health Rankings**

The County Health Rankings are developed from multiple data sources with varying levels of reliability, and some of these data sources are several years old. Consequently, the rankings and indicators do not provide precise and definitive evidence on where one county stands compared to another. However, in most cases the rankings and indicators are reliable enough to illustrate general community strengths and areas of concern, and they can be helpful for informing efforts to improve community health and well-being.

#### **Community Survey**

As noted earlier, the community survey was conducted as an open survey with convenience sampling rather than random household sampling. The survey results do provide rich insights into community perceptions of need. However, because of the convenience sampling strategy, they are not structured to support statistical analyses that would generalize the results from the sample to the broader population.

#### **Respondent Perceptions.**

In the community survey and the community insight events, respondents were invited to share their insights about a wide range of factors at the individual, household, and community level. Many of the survey questions rely on respondent perceptions of community concerns and community supports. Perceptions are subjective and based on the unique experience of each individual respondent. A respondent's perception of a community issue reflects their reality, but might not reflect the broader situation in the community.

# Bridging the Compass Now 2021 and 2024 Reports

The study methods used to produce this report were designed to provide continuity with the 2021 Compass Now Report where it was feasible and productive to do so. To summarize the similarities and differences:

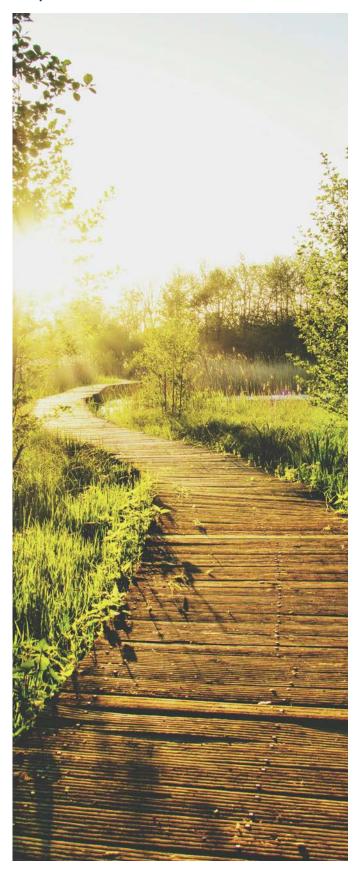

Although there is general continuity of structure between the 2021 and 2024 reports, caution should be used when comparing the results. One consideration is that many of the community indicators in the 2024 report are several years old, and the same was true for the 2021 report. This problem of 'data lag' is a challenge not only for the Compass Now study series, but also for every community study that relies on secondary sources of data. Consequently, it is not possible to measure improvement on community indicators from 2021 to 2024 in a relevant and reliable way.

Focusing on community data, this study relies heavily on County Health Rankings data, as did the Compass Now studies published in 2018 and 2021. There are some County Health Rankings data that are no longer available for this report, and these are noted in the relevant sections of the report.

This study also relies on local indicators of mortality, maternal and infant health, child health, and selected other factors. There are some differences in the availability and structure of selected indicators, and these are also noted in the relevant sections of the report.

Focusing on community surveys, the 2021 study included a highly structured, random household survey alongside a more open 'convenience sample' survey. In 2024 the study partners decided to focus on convenience sampling for the community survey, the rationale being that a convenience survey could be more flexibly focused on capturing insights from diverse populations across the study region. The study partners also conducted a series of 'community insight events' to capture additional perspectives from community members.

As a final consideration, this report is not intended as a scorecard on the health and well-being of one county compared to another. Throughout the report we provide county-level indicators on a number of community issues. However, these indicators are not structured to support reliable comparisons between counties. To illustrate this point, although the County Health Rankings do provide a relative ordering of counties on various indicators, in many cases the differences in ranking are not based on statistically significant differences in the underlying data used to generate the rankings. Beyond statistics, each county has its own unique set of factors that influence the health and well-being of the population. We recommend focusing on how to sustain strengths and address challenges within each county rather than comparing counties in scorecard fashion.

# **Demographic Profile**

As shown in **Exhibit 2.1**, the six-county region is home to an estimated 263,466 residents. Within the **Buffalo County** population of an estimated 13,234 people:

- An estimated 20% are children, and an estimated 23% are adults age 65+.
- An estimated 5% of the population is classified as other than White, and about 3% are classified as multi-race.
- An estimated 10% of households have income below poverty, and an estimated 37% have household income under \$50,000 per year

Exhibit 2.1 Demographic Snapshot of the Region

# **Demographic Maps**

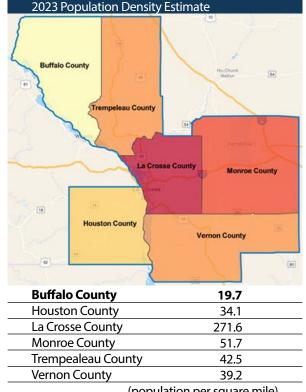

Demographic maps can be helpful for understanding the diversity and distribution of the community population. **Exhibits 2.3 through 2.11** illustrate the population distribution across the community based on demographic factors of poverty, age, race, and Hispanic ethnicity.

# Source: Community Health Solutions analysis of data from ESRI using ArcGIS Business Software. <u>See Appendix A for details.</u>

# Exhibit 2.3 Total Population and Population Density by County

Exhibit 2.3 shows the total population and population density by county. Buffalo County is home to an estimated 13,234 residents, with a relatively rural profile as indicated by the population density of people per square mile.

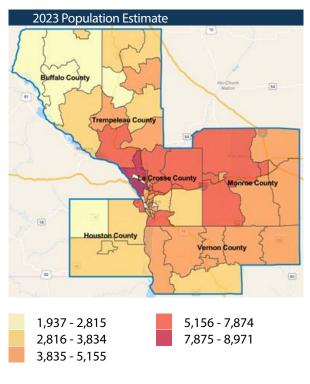

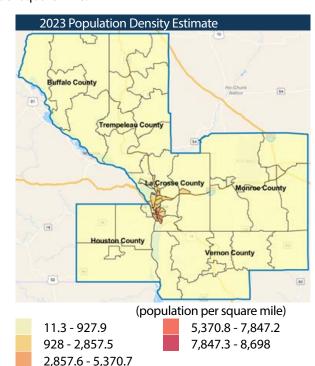

(population per square mile)

# Exhibit 2.4 Total Population by Census Tract

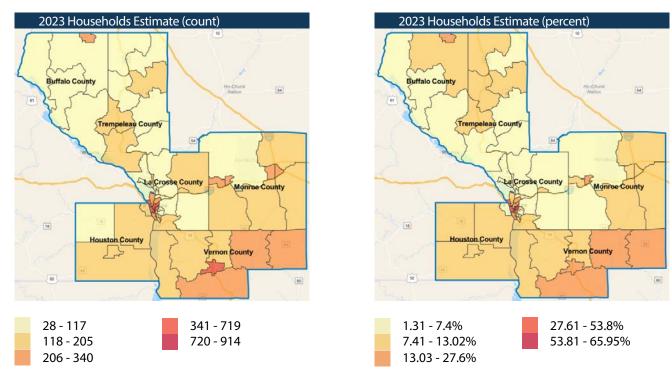

Exhibit 2.4 shows a closer look at population indicators by census tract. The left-hand map shows population counts, with darker shading indicating census tracts with higher populations. The right-hand map shows population density, with darker shading indicating higher density in terms of population per square mile.

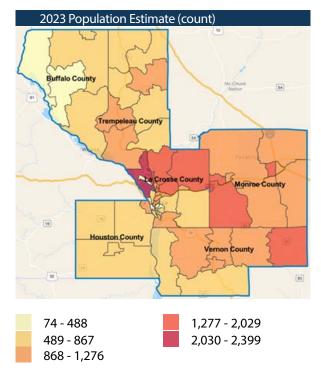

# Exhibit 2.5 Households with Income Below Poverty by Census Tract

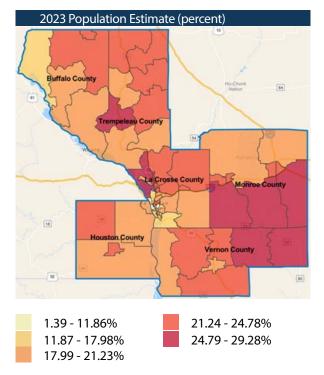

**Exhibit 2.5** shows households with income below poverty by census tract. The left-hand map shows household counts, with darker shading indicating census tracts with higher numbers of households in poverty. The right-hand map shows the percentage of households in poverty within each census tract.

# Exhibit 2.6 Child Population by Census Tract

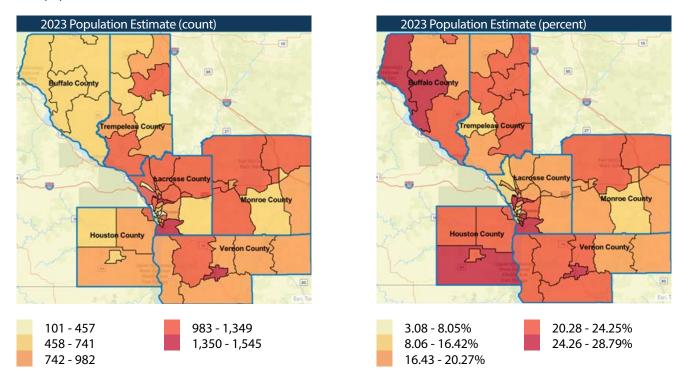

**Exhibit 2.6** shows the child population (<18) by census tract. The left-hand map shows population counts, with darker shading indicating census tracts with higher numbers of children. The right-hand map shows children as a percentage of the total population within each census tract.

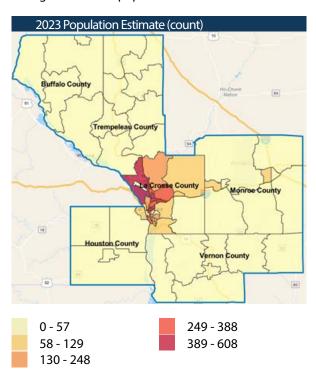

# Exhibit 2.7 Older Adult Population by Census Tract

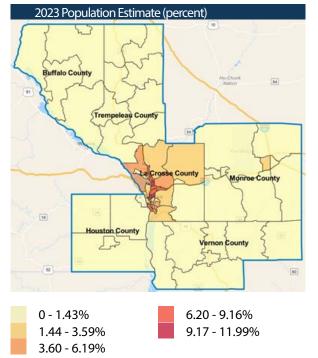

**Exhibit 2.7** shows the older adult population (65+) by census tract. The left-hand map shows population counts, with darker shading indicating census tracts with higher numbers of older adults. The right-hand map shows older adults as a percentage of the total population within each census tract.

# Exhibit 2.8 Asian Population by Census Tract

**Exhibit 2.8** shows the Asian population by census tract. The left-hand map shows population counts, with darker shading indicating census tracts with higher numbers of people classified as Asian. The right-hand map shows the Asian population as a percentage of the total population within each census tract.

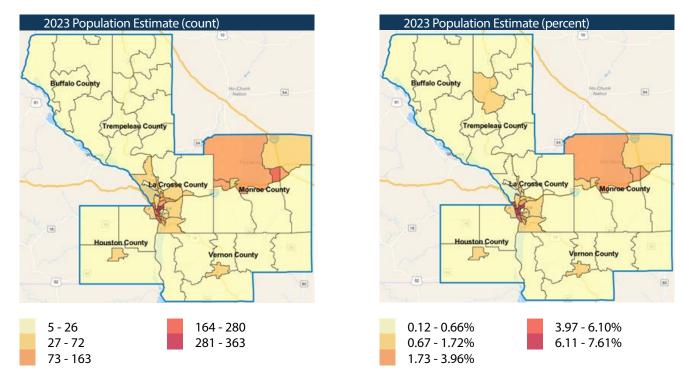

Source: CHS analysis of population estimates published by ESRI. <u>See Appendix A for details.</u>

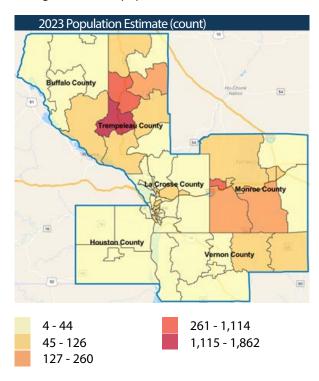

# Exhibit 2.9 Black / African American Population by Census Tract

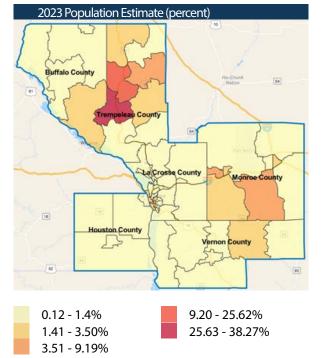

**Exhibit 2.9** shows the Black or African American population by census tract. The left-hand map shows population counts, with darker shading indicating higher numbers of people classified as Black or African American. The right-hand map shows the Black or African American population as a percentage of the total population.

# Exhibit 2.10 Other Race Population by Census Tract

**Exhibit 2.10** shows the Other Race population by census tract. The left-hand map shows population counts, with darker shading indicating higher numbers of people classified as Other Race. The right-hand map shows the Other Race population as a percentage of the total population.

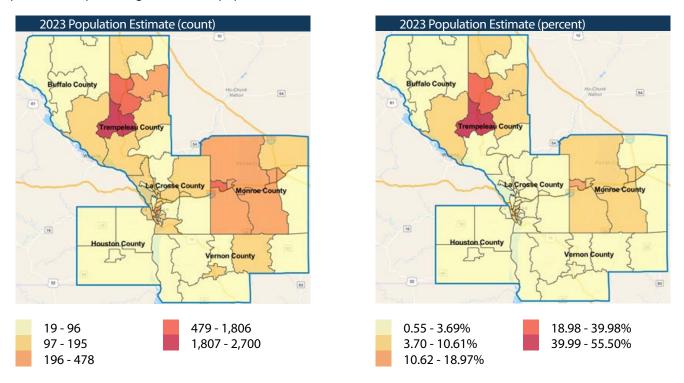

Source: CHS analysis of population estimates published by ESRI. <u>See Appendix A for details.</u>

# Exhibit 2.11 Hispanic Population by Census Tract

**Exhibit 2.11** shows the Hispanic ethnicity population by census tract. The left-hand map shows population counts, with darker shading indicating higher numbers of people classified as Hispanic. The right-hand map shows the Hispanic population as a percentage of the total population.

Source: CHS analysis of population estimates published by ESRI. See Appendix A for details.

# **Summary of County Health Rankings**

**Exhibit 2.12** provides a profile of the County Health Rankings for the six-county region. provides a profile of the County Health Rankings for the six-county region. Within the exhibit, Houston County is ranked among other counties in Minnesota, and the Wisconsin counties are ranked among all counties in the state. The top part of the exhibit indicates that **Buffalo County** ranked in the 1st (best) quartile statewide on indicators of health outcomes and length of life, but has lower rankings for clinical care and physical environment. The lower part of the exhibit indicates a mix of worsening (W for Worse) and improving (B for Better) trends within the county. The County Health Rankings are explored in more depth within Sections 3-7 of the report.

# Exhibit 2.12 County Health Rankings Summary for 2023

# 3. Length and Quality of Life

Measures of length of life in a community indicate whether people are dying too early, prompting discussion of possible reasons and action strategies. Measures of quality of life indicate how people feel about their health and well-being at a given point in time. This section describes selected community indicators and community insights about length and quality of life.

# **Community Indicators**

**Exhibit 3.1** shows the County Health Rankings for length and quality of life. The rankings are based on a set of indicators including premature death, physical and mental health status, and low weight births. The results indicate that **Buffalo County** is in the 1st (best) quartile in Wisconsin for length of life, and the 2nd quartile for quality of life. Focusing on available trend data, the premature death rate is improving in **Buffalo County.**

<sup>\*</sup>Houston County is ranked among all Minnesota counties. Other counties are ranked among all Wisconsin counties.

<sup>\*\*\*</sup> As reported in Exhibit 3.1, County Health Rankings uses a rolling, multi-year average of low birth-weight in its ranking model. Exhibit 3.3 reports a one-year rate for 2021 or 2020 as indicated. Source: University of Wisconsin-Madison Population Health Institute. *County Health Rankings*. Retrieved in July 2023 from <a href="http://www.countyhealthrankings.org">http://www.countyhealthrankings.org</a>.

I would like to see more continuing education opportunities for senior citizens. More opportunities for retirees to engage with the community now that they have more free time.

~ Vernon County Survey Respondent

<sup>\*\*</sup> Premature death is defined as years of potential life lost before age 75 per 100,000 population (age-adjusted).

**Exhibit 3.2** shows the leading causes of death in the region in 2021 for Wisconsin Counties, and 2020 for Houston County. For **Buffalo County**, the two leading causes by a substantial margin were heart disease and malignant neoplasms (cancers), which is typically the case in United States communities. Covid-19 was also among the leading causes, along with accidents, chronic lower respiratory diseases, and cerebrovascular diseases.

**Exhibit 3.3** shows indicators of maternal and infant health for the region. Note that reporting years differ for Houston County, and also note that infant deaths are counted across a five-year period.

- The low birth weight rate for **Buffalo County** was 9%.
- The five-year infant death rate was 3.1 deaths per 1,000 live births for **Buffalo County.**

# Exhibit 3.3 Maternal and Infant Health

# **Community Insights**

**Exhibit 3.4** shows ratings of selected aspects of community life on a scale from poor to excellent. Ratings are shown for each of the six counties and at the regional level. Topics receiving ratings of poor or fair for **Buffalo County** included:

- a. 12% for the community as a place to live
- b. 62% for the community as a place that meets their family's recreational needs
- c. 61% for opportunities to explore interest and participate in positive activities
- d. 40% for opportunities to volunteer
- e. 48% for the community as a place where all people are treated respectfully
- f. 56% for the community as a place where people of different cultural/racial/ethnic backgrounds are included in decision making

their health, such as eating well, being physically active and avoiding smoking, excessive alcohol intake, and risky sexual behavior. This section describes community indicators and community insights about health behaviors and related concerns.

# **Community Indicators**

**Exhibit 4.1** shows the County Health Rankings for health behaviors. The rankings are based on a set of indicators including smoking, obesity, food environment, physical activity, alcohol use, and sexual activity. The results indicate that **Buffalo** County ranked in the 2nd quartile for Wisconsin. Focusing on available trend data, the trend is getting worse for sexually transmitted infections.

**Exhibit 4.2** a shows a set of youth health behavior risk indicators for four of the five Wisconsin counties in the 2020-21 school year. Comparable data were not reported for Vernon County, and additional data from a separate survey effort in Houston County are summarized in Exhibit 4.2b. Focusing on available data for **Buffalo County:** 

- The indicators are based on anonymous survey responses by high school students on a range of youth risk factors as of the 2020-2021 school year.
- The indicators shown include alcohol and drug use, auto safety, mental health, personal safety, sense of belonging, sexual activity, and sleep, nutrition, and exercise.
- The indicators for **Buffalo County** indicate significant numbers of youth are experiencing or engaging in health risk situations.

I am also concerned with the use of technology and social media, especially in regards to young people and how it is impacting their mental health.

~ Vernon County Survey Respondent

~ Vernon County Survey Respondent

**Exhibit 4.2b** shows a set of youth health behavior risk indicators for Houston County in the 2021-2022 school year. These indicators were developed using a different survey instrument and sampling methodology than was used in Wisconsin.

- The indicators shown include personal safety; adverse childhood experience; food, physical activity, and sleep; mental health; and substance use.
- As in the Wisconsin counties, the Houston County results indicate significant numbers of youth are experiencing or engaging in health risk situations.

We don't have enough addiction and/ or mental health treatment resources in the wider area. When people want help, it doesn't seem like they have a place to go for in-patient treatment.

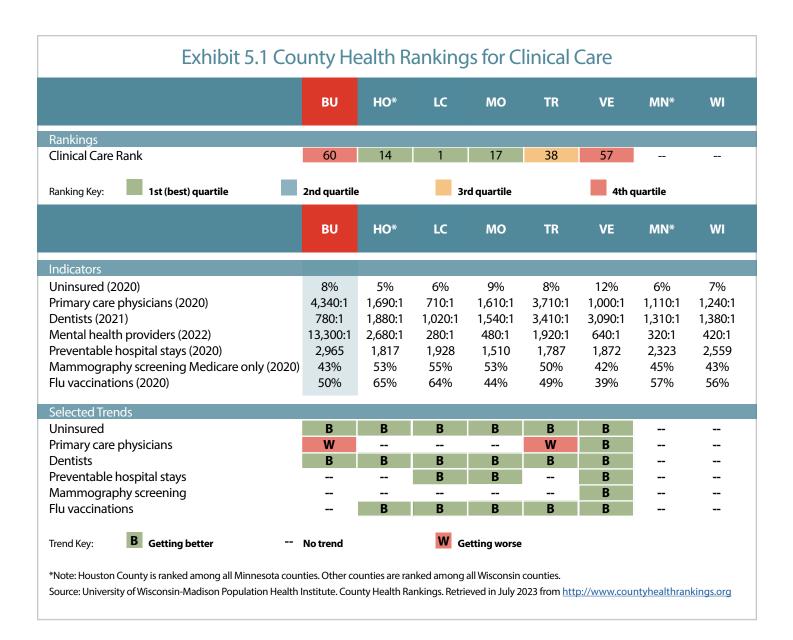

~ Vernon County Survey Respondent

#### **Community Indicators**

Exhibit 5.1 shows the County Health Rankings for clinical care. The rankings are based on a set of indicators including uninsured rates, health care provider supply, preventable hospital stays, mammography screening, and flu shots. Buffalo County ranked in the 4th quartile for clinical care. Trends indicate that Buffalo County is improving on indicators of uninsured and supply of dentists and worsening on primary care clinician supply.

I am aging and I worry that I might need to move to assisted living or a nursing home and there is a big shortage of staff for the places in this community. I would like to see more help for those training to work in healthcare so that there are more people available to staff such facilities.

~ Vernon County Survey Respondent

**Exhibit 5.2** shows selected cancer screening rates for each county within the region. Note that rates shown are estimates, and apparent differences may be within the estimation margin of error. Estimated screening rates for **Buffalo County** are as follows:

- 74% for breast cancer screening (mammogram)
- 83% for cervical cancer screening
- 61% for colorectal cancer screening

#### **Exhibit 5.2 Cancer Screening Rates**

I work from pay check to pay check just to make a living. And then I don't have no money to myself. That's why I cant retire and enjoy life anymore!!

~ Monroe County Survey Respondent

Exhibit 6.2 shows data on low-income households and ALICE households. Summary points for Buffalo County:

- In **Buffalo County** there were an estimated 538 households with income at or below poverty in 2021. This represents an estimated 10% of all households.
- ALICE is an acronym for Asset Limited, Income Constrained, Employed, and provides a way of defining and understanding the struggles of households that earn above the Federal Poverty Level, but not enough to afford basic necessities. In 2021 an estimated 1,310 households in **Buffalo County** were classified as ALICE households.

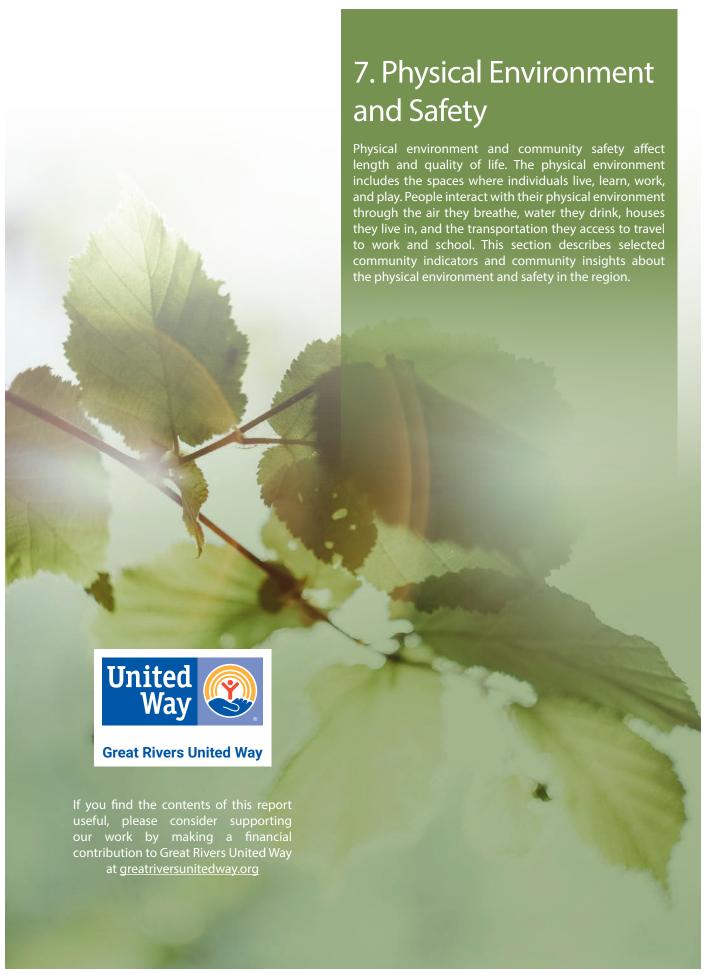

**Exhibit 6.11** provides further insight into community support needs through 2-1-1 call data. For each county and the region in calendar 2022, the exhibit shows 2-1-1 call types, the common caller problems or needs, and the common referral types. (Note that the exhibit only shows the 5 most common problems/needs and referral types for each county and region. Dozens of additional concerns were also presented by callers.)

- The most common problems or needs presented by calls were related to mental health/addictions, housing, food/meals, health care, and information services.
- The most common referral types included referrals for directory assistance, housing-related assistance, food assistance and counseling.

#### **Community Indicators**

**Exhibit 7.1** shows the County Health Rankings for the physical environment. The ranking are based on a set of indicators including air pollution, drinking water violations, housing problems, driving alone to work, and commute time.

- Buffalo County ranked in the 4th quartile on physical environment measures.
- Available trend data show air pollution is improving in Buffalo County.

Most of our services to protect the community are ran on a voluntary basis. The lack of people wanting to work and or volunteer is a cause for concern.

~ Buffalo County Survey Respondent

**Exhibit 7.5** summarizes community survey results regarding preparedness for emergency events. Ratings are shown for each of the six counties and at the regional level. Summary results for **Buffalo County** included:

- 57% said they were not or a little prepared for household fire
- 62% said they were not or a little prepared for flood
- 45% said they were not or a little prepared for a power outage longer than 24 hours
- 46% said they were not or a little prepared for a natural disaster
- 40% said they were not or a little prepared for a pandemic
- 61% said they were not or a little prepared for loss of a job

**Exhibit 7.6** summarizes community survey results regarding concerns about public spaces. Ratings are shown for each of the six counties and at the regional level. The percent saying they were very or moderately concerned about each topic for **Buffalo County** included:

- a. 18% loose animals
- b. 36% sidewalks in poor condition
- c. 31% lack of sidewalks
- d. 21% inadequate crosswalks
- e. 15% motor vehicle traffic
- f. 10% not enough traffic lights / stop signs
- g. 20% street lighting

# 8. Additional Community Insights

Beyond the results presented in Sections 1-7, the study gathered additional community insights from community members in their own words. These insights were collected through two channels, the community survey, and a series of community insight events. This section presents a summary of those results, prefaced with a brief description of thematic analysis methods used to summarize the results.

#### Thematic Analysis

Through the community survey and the community insight events, respondents were invited to respond to particular questions in their own words rather than through a predefined checklist. To summarize the results, Community Health Solutions applied a method called 'thematic analysis' to identify common themes among the responses. Thematic analysis is a process for grouping text responses into categories based on common words and phrases. It is a commonly used method in qualitative analysis. The results of this summary analysis are presented in the exhibits that follow.

In reviewing the results of the thematic analysis, it is important to note that this approach is designed to identify broad themes as a starting point for further analysis. The detailed responses collected through the survey and the community insight events provide a much richer database for understanding community member perspectives in their own words. All of the detailed responses have been shared with the project partners.

#### Themes from the Community Survey

At the end of the community survey instrument, respondents were invited to provide any additional comments in their own words. As shown in **Exhibit 8.1**, a total of **169** comments were received from all survey respondents from all counties. A total of **18** comments were received from **Buffalo County** survey respondents. Among these:

- Themes identifying service needs included social supports, housing, health care services and coverage, employment, substance use concerns, and taxes.
- Particular populations mentioned included children and families, and older adults.

#### Exhibit 8.1 Thematic Analysis: Additional Comments from Survey Respondents

#### Themes from Community Insight Events

In addition to the survey of community residents, the study also included a series of community listening events facilitated by personnel from the project partner organizations. The events were held either onsite at community locations or virtually via Zoom. **Exhibit 8.2** lists the event dates and locations.

# An Important Note on Methods

**Exhibits 8.3-8.7** present the thematic analysis of insights captured at the events. During the events, participants were invited to share multiple insights in response to each question. Consequently, a participant's response to a given question might include several different insights, or 'statements.' With this dynamic in mind, the unit of analysis in the following exhibits is the number of statements classified into each theme, rather than the number of individuals.

**Important Health Issues.** Participants in community insight events were asked: What do you see as the most important health issues or concerns facing your community? **Exhibit 8.3** lists the results.

- As shown in Part A of the exhibit, the most common themes identifying services needs included
  health care services and coverage, mental health, social services/supports, substance use concerns,
  and health behaviors.
- As shown in Part B, particular populations mentioned included children and families, low-income
  population, people with chronic conditions, older adults, rural populations, LGBTQ+ populations,
  minority population / people of color, immigrants/undocumented, and people with disabilities.

# 9. Prioritization & Reflection

# Community Insight on Priority Needs

All information presented thus far has been collected data and community input. As a culmination of the Compass process, three community stakeholder meetings were offered on March 12, 2024 at the Sparrow's Nest at the Abbey in Sparta, WI; on March 13, 2024 virtually; and on March 18, 2024 at the Sparrow's Nest at the Abbey. Two meetings were open to the public and one meeting was for people working within Monroe County coalitions. The agenda for all meetings was similar: to review the data, discuss community issues, prioritize community issues, and identify community assets.

If you find the contents of this report useful, please consider supporting our work by making a financial contribution to Great Rivers United Way at greatriversunitedway.org The stakeholder meetings were publicized through email invitations to stakeholders and a press release. Participants included representatives from local businesses, education, government, health care, and nonprofit organizations. A total of 22 individuals participated in the Monroe County meetings. The meetings were planned and facilitated by individuals from the Monroe County Health Department. Meetings that occurred in the Compass counties are listed in **Exhibit 9.1.**

Stakeholder meeting participants were presented with data from their county and given opportunities to give input on the top needs of the county. Presentations can be found online at <a href="https://www.compassnow.org">www.compassnow.org</a>.

Facilitators presented data through Power Point slides. Data was presented as infographics of the following topics: Maternal and Child's Health, Nutrition and Physical Activity, Communicable Disease, Oral Health, Environment (built and quality of), Access to Care, Social and Economic Factors (includes housing, employment, education, transportation, and childcare), Injury and Violence, Substance Use, and Mental Health. The presentation can be found online at <a href="https://www.compassnow.org">www.compassnow.org</a>.

At three points during the presentation, participants were given opportunities to discuss the topics presented using the following prompts:

- Which health areas have the largest community impact?
- Which health areas have the most serious impact?
- Which health areas is our community ready to change?

At the end of the stakeholder meeting, participants were given the opportunity to rank community needs by the topics covered in the presentation: Access to Care, Aging and Disability, Built Environment, Dental Health, Education, Housing, Income/Employment, Infectious Disease, Injuries and Violence, Maternal and Child Health, Mental Health, Nutrition/Access to Food, Physical Activity, Quality of Environment, and Substance Use. Participants were instructed to mark the three topics they felt were the most critical needs or issues. The top five health needs/issues are shown in **Exhibit 9.2.**

#### Reflection on Top 5 Needs

The following is a review of data relating to the top 5 issues identified as priorities for Buffalo County. As we reflect on these top needs, we also recognize that the issues identified affect some groups more than others. While this report is intended as a broad overview of the status of the health of the region, it is just a starting point in exploring how best to respond to our health needs. Using a health equity lens is important in understanding how vulnerable groups such as those who are low-income, LGBT+, have a disability, or are a racial or ethnic minority are impacted differently and the root causes of those differences.

#### Youth Dating/Sexual Violence

Buffalo County stakeholders identified youth dating violence/ sexual violence as a top need.

Section 4 of this report covers data on youth risk. Section 6 of this report covers data related to concerns for vulnerable people. Among Compass Survey respondents, 59% were moderately or very concerned about sexual abuse or sexual violence.

**Exhibit 9.3** shows injury, violence, and safety data shared at the stakeholder meetings. According to the 2021 Youth Risk Behavior Survey (YRBS) report, 15% of all students experienced sexual or dating violence. Looking at just female students, nearly 1 in 4 (24%) reported experiencing sexual or dating violence.

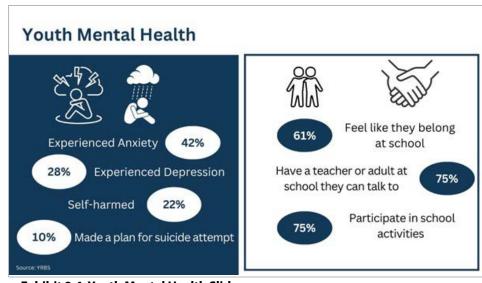

**Exhibit 9.3 Injury & Violence Slide** 

#### Mental Health

Buffalo County stakeholders identified mental health as a top need. Mental health in general was an overarching theme in stakeholder meetings. Specific concerns discussed were the increase of people rating their overall mental health as fair or poor, fair/poor access to mental health care, fair/poor ability to pay for mental health care, the lack of mental health providers, and youth mental health.

Section 4 of this report covers youth mental health data, survey respondents' rating of their mental health, and survey respondents' level of concern about mental health and mental health stigma. Section 5 of this report covers data on the availability of mental health providers and survey respondents' rating of their ability to access and pay for mental health care. Infographic data from the stakeholder meeting presentation supporting this need follow.

**Exhibit 9.4** shows youth mental health data. Youth report experiencing mental health issues. In the 2020-2021 Youth Risk Behavior Survey taken in high schools in Buffalo County youth were asked a series of questions regarding mental health. Nearly half answered that they had experienced either anxiety, depression, selfharm, and/or suicidal ideation in the past year. Further analysis shows higher percentages of students who are low-income or identify as LGBT+ experiencing mental health problems. For more information on the Youth Risk Behavior Survey, please visit Wisconsin Department of Public Instruction online at https:// dpi.wi.gov/sspw/yrbs.

**Exhibit 9.4: Youth Mental Health Slide** 

Over time, survey responses rating people's overall mental health, access to mental health care, and the ability to pay for mental health care have varied. There were improved ratings from 2018 to 2021, but worse ratings in 2024. While the Compass survey is considered a snapshot in time and can't be used to make general conclusions about the whole population, it is a concern that an increasing proportion of respondents have rated their overall mental health as fair or poor and at the same time rated increasingly fair or poor access to care. Exhibit 9.5 is a slide of mental health data from the Buffalo County stakeholder meeting.

#### **Childcare Access**

Buffalo County stakeholders identified childcare access as a top need. Stakeholders were concerned about the accessibility and affordability of childcare in the county.

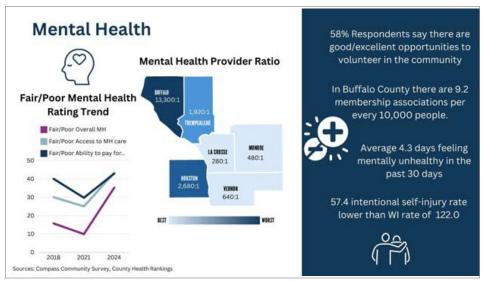

Section 6 of this report covers concerns about meeting household needs including childcare access and affordability.

**Exhibit 9.6** shows the childcare data shared at the Buffalo County stakeholder meetings.

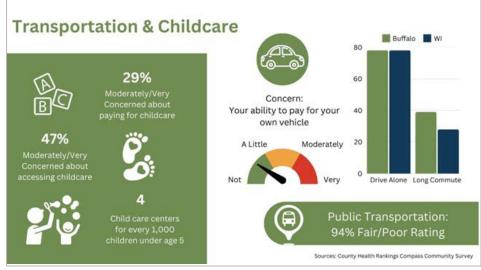

#### Lyme Disease

Buffalo County stakeholders identified Lyme Disease as a top need. The increase in Lyme Disease raised concerns for the need to increase awareness and monitoring of incidence rates.

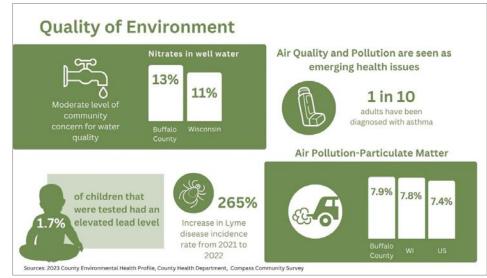

Section 7 of this report covers Physical Environment and Safety. While only19% of survey respondents were moderately or very concerned about disease outbreak, stakeholders reviewing data on specific environmental concerns (Exhibit 9.7) noted the 265% increase in Lyme disease incidence from 2021 to 2022. The

**Exhibit 9.5: Mental Health Slide** 

**Exhibit 9.6: Transportation & Childcare Slide** 

**Exhibit 9.7: Quality of Environment Slide** 

latest data showed Buffalo County had a much higher Lyme Disease incidence rate per 100,000 people of 164.3 compared to the Wisconsin average rate of 90.0.

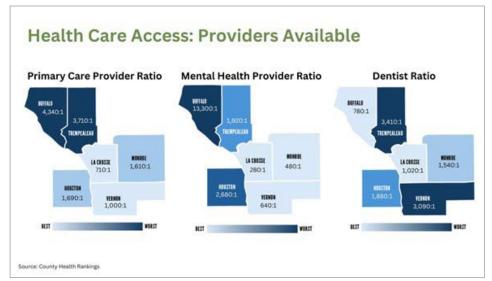

#### **Healthcare Access**

Buffalo County stakeholders identified healthcare access as a top need. With a major healthcare provider closing its doors in 2024, stakeholders were concerned about people living in the community being able to access basic healthcare.

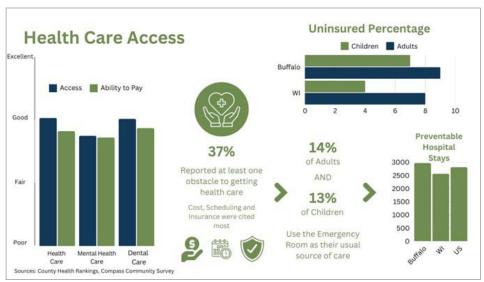

Section 5 of this report covers Health Care Access and Utilization data. Infographic data from the stakeholder meeting presentation supporting this need follow.

**Exhibit 9.8** is the Buffalo County stakeholder meeting slide showing the ratio of population for every 1 provider for primary healthcare, mental health care, and dental care. As shown by the darker shade of blue, Buffalo County has the most people per primary care provider than any other county included in this report.

**Exhibit 9.9** is the Buffalo County stakeholder meeting slide showing other data related to health care access. More than 1 in every 3 survey respondents reported at least one obstacle to getting health care when they needed and Buffalo County had a higher rate of preventable hospital stays than the state of Wisconsin and the country.

**Exhibit 9.8: Health Care Access: Providers Available Slide** 

**Exhibit 9.9: Health Care Access Slide** 

#### **Community Assets**

An important step in addressing community needs is identifying community assets. Buffalo County stakeholders were asked to identify community assets that could be leveraged to help address the community's top needs. Exhibit 9.10 are the organizations, groups, programs, and characteristics identified as community assets. The list is a starting point and not exhaustive.
